

Music family

Meet Music: the world's most intelligent wireless music system. It adapts seamlessly (and automatically) to any room or position. It senses and adapts to surrounding noise levels. And it even creates instant personalised playlists of the music it knows you'll love with Music Now. Just push play...

DYNAUDIO

Dynaudio Music: one-touch simplicity

Music Now learns what you like and plays it for you at the touch of a button on the speaker – from all your favourite music services.

All speakers in the Music family use cutting-edge digital processing to sense where they've been placed. They optimise their performance to fit (even when you move them) and they adjust themselves for varying noise-levels, so your music always sounds clear at any volume and in any position.

Set it up from the free Dynaudio app. Then just push play.

Your music, your way

The free Dynaudio Music app for iOS and Android connects to popular music-streaming services including TIDAL and Spotify. Got accounts with more than one? The system uses them simultaneously to generate its smart playlists.

Each speaker has five presets. These can be filled with anything accessible from the app: Music Now playlists, internet radio stations, single songs, regular TIDAL and Spotify playlists and more – even dedicated presets for different family members. All you have to do is press the button on the speaker and you're listening straight away.

It doesn't matter where you put it

Music is smart in other ways, too. It doesn't matter if the speaker is in a corner, up against a rear wall or standing in free space: built-in RoomAdapt technology senses where it's been placed and continually optimises its tonal characteristics to deliver the best performance possible. You'll hear it most in the clean, accurate bass and midrange.

Essential musical details will always be clear too, thanks to NoiseAdapt – even when the room is noisy, and the speaker volume is low. You don't need to crank the volume to hear your tunes properly when the conversation gets louder (or quieter), and you don't need to adjust any tone controls. It's all automatic.

All this is based on our expertise in DSP (digital signal processing), gained from researching and developing high-end active speakers, professional studio set-ups and cutting-edge in-car hi-fi systems.

All the connectivity you need

Every speaker in the Music range can stream via Wi-Fi, Spotify Connect, aptX Bluetooth and Apple AirPlay, and can access DLNA devices on your home network. They all have USB inputs for iOS audio and charging iOS devices, and can all accept 3.5mm analogue inputs too (so you can even hook up your old personal stereo if you want).

The Music 5 and Music 7 add digital optical inputs to the mix (both can support signals up to 24-bit/96kHz), while the Music 7 also has an HDMI input with Audio Return Channel to turn it into a soundbar under your TV.

Up to six speakers can be connected at a time, and arranged into multiroom groups or controlled individually from the Dynaudio app.

Traditional Dynaudio craftsmanship

All the speakers use Dynaudio's proprietary MSP cone material in their woofers and midrange drivers (the same material used across our entire product family, right up to our range-topping Evidence Platinum series). Their soft-dome tweeters are based on our high-end speakers. And it's all been tuned by the same team who work on our money-no-object hi-fi speakers and no-compromise pro studio systems.
